The Filter Mask For Allergy Sufferers

CONTAINS 3 MASKS

NIOSH N95
Disposable
Respirator with
Exhalation
Valve

Provides RELIEF
by Filtering the
Air You Breathe!

"The Relief You Need During Routine Household Chores"

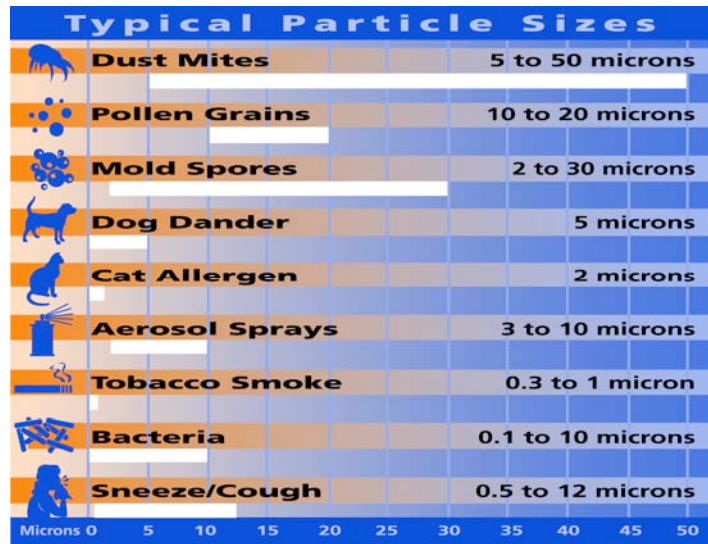

Are You Allergic to Housework?

By protecting you from small particles stirred up by house and lawn work, the **AllergyZone N95** mask provides relief from potential triggers of your allergy symptoms. The simple design and near weightlessness makes the Filter Mask comfortable to wear in any activity. The filter technology allows the mask to release exhaled breath through the valve and then close during inhalation so the inhaled air is filtered of small dust particles.

This mask, when fitted properly, is 95% efficient at filtering particles down to 0.3 microns in size.

The air valve allows your exhaled air to escape, reducing the build up of moisture and heat in the mask, which keeps you comfortable while providing relief from airborne irritants!

Relief when you need it!

This high efficiency Filter Mask is designed to provide relief by reducing your exposure to fine particles and allergens during chores or any activities that may cause exposure to dust including: raking leaves, mowing, sweeping, vacuuming, gardening, and dusting.
